

ERIC LARWA

Greenville, NC | (252) 907-1168 | eric.larwa@gmail.com | github.com/EricLarwa | ericsweb.vercel.app

PROFESSIONAL SUMMARY

Motivated software engineering student with hands-on experience in full-stack web and mobile development, IT operations, and data analytics. Skilled in building RESTful APIs, developing responsive interfaces, integrating databases, and supporting network infrastructure. Known for collaborative work in team environments and a proactive problem-solving mindset. Currently seeking a Fall 2025 software engineering co-op focused on application development, systems programming, or technical problem-solving.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, TypeScript, C#

Frameworks/Libraries: React.js, React Native, Node.js, Express.js

Tools: Git, Docker, PostgreSQL, MongoDB, SQLite

Concepts: RESTful APIs, Object-Oriented Design, Data Visualization

Environments: Linux, Windows

Other: Network Configuration, VLANs, DHCP, Endpoint Security, Remote Device Management

EDUCATION

Bachelor of Science in Software Engineering

East Carolina University, Greenville, NC — Expected May 2026

GPA: 3.62

Relevant Coursework: Software Architecture, Web Development, Database Management, Cloud Computing, Big Data Analytics, Mobile Computing, Operating Systems, Computer Networks

PROFESSIONAL EXPERIENCE

I.T. / Data Analyst Intern / *Airboss Rubber Solutions*

June 2025 – Present

- Independently manage daily IT operations on-site with remote supervision by Canadian IT leadership.
- Configured VLANs to optimize network segmentation and enhance data flow.
- Deployed wireless access points throughout the facility to improve connectivity.
- Built and configured DHCP services to automate IP address management.
- Collaborated with the Data Analytics team on an internal dashboard currently used in production.
- Gained practical experience with endpoint security, remote device management, and network protocols.

Teaching Assistant – Data Structures / Software Architecture / Requirements Engineering / Mobile Computing / East Carolina University

Jan 2025 – Present

- Assist students in understanding advanced data structures, algorithms, and software design patterns.
- Lead lab sessions, review code, and provide guidance on debugging and modular programming techniques.
- Support instructor with grading, content planning, and maintaining student engagement.

Full Stack Developer (Student Project) – Smart Gym Companion / Personal Project

Mar 2024 – Dec 2024

- Designed secure user login and log-tracking features using RESTful APIs, reducing backend response time by 12%.
- Integrated an SQLite database for storing activity logs and user history.
- Delivered a visually engaging front-end with React.js for seamless user interaction.

Data Analyst (Student Project) – eCommerce Research / East Carolina University

Feb 2025 – May 2025

- Analyzed eCommerce sales data to identify trends, customer behavior, and segmentation.
- Improved dataset processing efficiency by 15% using Python and PostgreSQL/MongoDB.
- Created visual dashboards to support actionable insights and business decisions.
